

## **CARE AND CLEANING INSTRUCTIONS**

**The water tanks are manufactured from Polyethylene resins, certified non-toxic by Canadian and U.S. Government Health, Food and Drug officials. Because Roto Molded tanks are formed in one piece, there is no human contact with tank interiors. All openings are sealed with plastic plugs prior to shipment. Because of the possibility that contamination may occur during the normal process of installing the tank, we suggest that the system be sanitized by the dealer prior to delivery to the final user. It is also suggested that this sanitation (outlined below) be used when the system has not been used for sometime, or on one that may have been contaminated.**

### **TO SANITIZE TANK:**

- 1. Prepare a chlorine solution using one gallon of water and a ¼ cup of household bleach (5% sodium hypochlorite solution) \*DO NOT USE FRESH SCENT OR ANY SCENT ENHANCED BLEACH\*. With tank empty, pour chlorine solution into tank. Use one gallon of solution for each 15 gallons of tank capacity.**
- 2. Complete filling of tank with fresh water.**
- 3. Allow to stand for three (3) hours**
- 4. Drain and flush with potable fresh water.**

**Any residual chlorine odor will dissipate naturally.**
